Introducing
The Oral Health Workforce Research Center

CHWS is proud to present the Oral Health Workforce Research Center (OHWRC), funded by a recent Cooperative Agreement from the federal Health Resources and Services Administration (HRSA). It is anticipated that the Oral Health Workforce Research Center will be supported by more than $1.1 million over three years. CHWS is one of five health workforce research centers in the country, but now the only one uniquely focused on the oral health workforce. Learn more about OHWRC by visiting our new website.

Briefs
Trends in Demand for New Physicians, 2009-2013

CHWS conducts an annual survey of all physicians completing a residency or fellowship training program in the State of New York. Based on the data from these surveys, this report presents profiles for 35 specialties and summarizes trends in five key areas related to physician supply and demand, including: starting income, job offers, having to change plans due to limited practice opportunities, relative demand, and number of graduates.

The Oral Health Workforce in New York

While New York has made strides in recent years to improve the oral health of its diverse population, concerns about oral health disparities persist. The distribution of two key oral health professions, dentists and dental hygienists, practicing throughout the state are described in this brief. The brief also explores practice characteristics, demographics, and location of training vs practice location.

Works in Progress

Nursing Workforce Modeling in NY

An adequate supply and distribution of nurses is an essential component of an effective
health care system. CHWS has begun work on an assessment of the adequacy of the nursing workforce in New York. This exciting new project, funded by the New York State Department of Health, will examine the adequacy of the nursing workforce at both the state and regional levels and provide projections of the future nursing workforce under a number of scenarios. CHWS plans to use the new microsimulation nursing workforce supply and demand modeling system developed for the federal Health Resources and Services Administration. Preliminary results of the assessment and a final report will both be released later this year.

News & Events

Presentations

CHWS Director Jean Moore attended the International Conference on Human Resources for Nursing and Health Research, held at the University of Sao Paolo School of Nursing in Sao Paolo, Brazil, on October 20-22, 2014. Dr. Moore lead two presentations: Health Professions and Practice Regulations in the Interprofessional Perspective: The U.S. Experience and Nursing Advanced Practice Management: Nurse Practitioners in the United States.
